

METAMORPHOSIS: Immersive Kafka

Abstract

This *experimental interactive short film* is an authentic adaptation of Kafka's famous story where Gregor Samsa one morning finds himself transformed in his bed into a gigantic insect... The film tells the story using a subjective camera, experiencing what happens entirely from Gregor's perspective. It was shot with a 360° spherical camera to create a unique perspective and beyond the film/DVD it offers several interactive features available on-line and in the form of an art installation.
